Project 4 Self Analysis

1. What was the hardest part of the assignment for you?

Question 4 gave me the most challenges, though I was mostly minor bugs that needed to be squashed.

2. What was the easiest part of the assignment for you?

Question 3 was a very straightforward algorithm to implement.

3. What problem(s) helped further your understanding of the course material?

All of the questions forced me to review the course material, but particularly the first 5.

4. Did you feel any problems were tedious and not helpful to your understanding of the material?

Question 3 wasn't particularly relevant to the course material, but wasn't tedious either.

5. What other feedback do you have about this homework?

A bit tougher than some of the previous projects, but still not too bad.
